# Introduction to data

Question: “Do you see a bicycle?”

- ❖ Number of tasks: 9087
- ❖ Number of Annotators: 22
- ❖ Each task annotated: 10 times

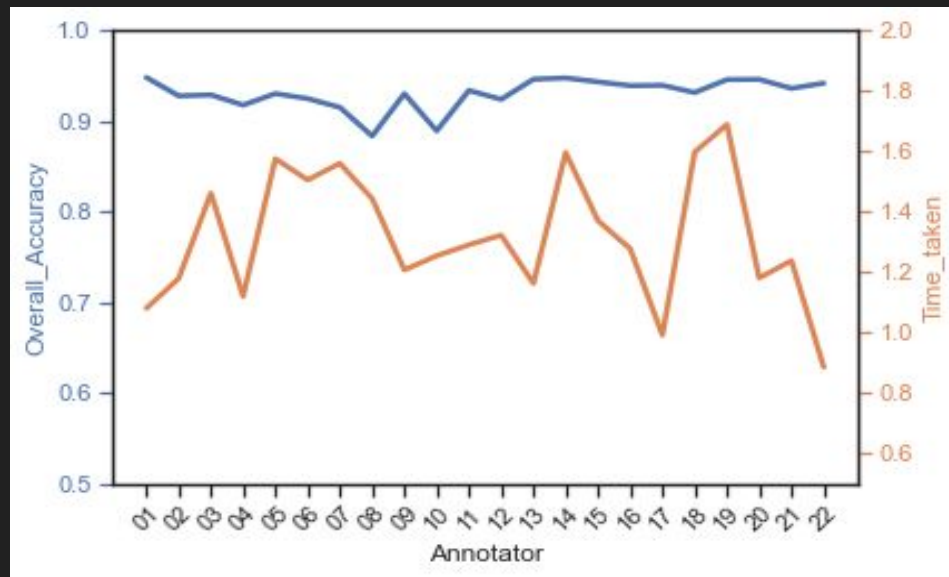

# Distribution of Images across Annotators

# Overall Annotation Results

Total annotations

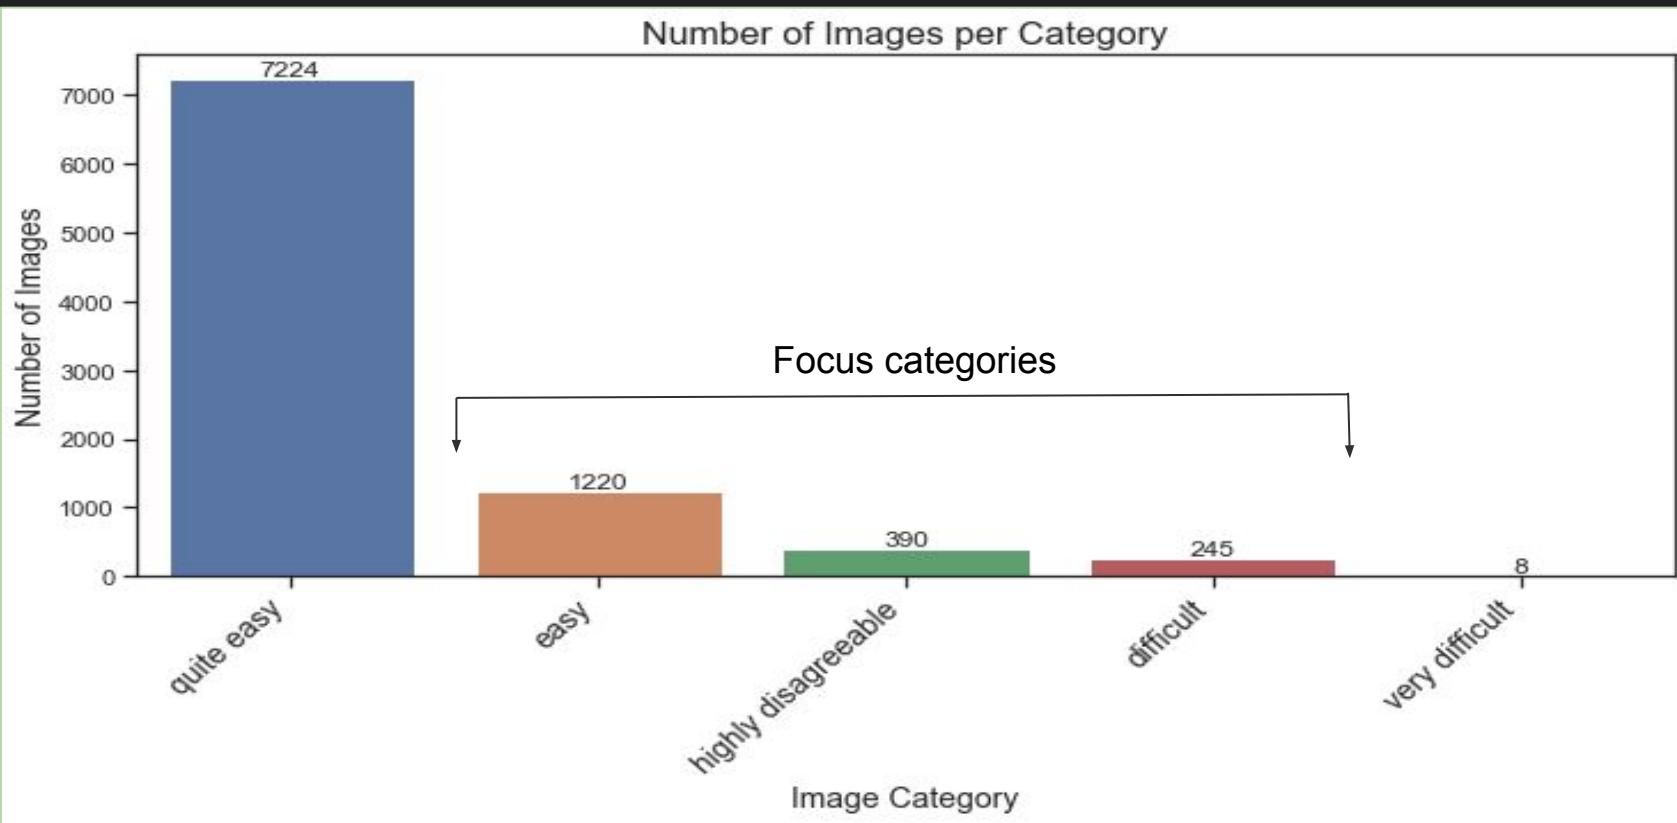

Accuracy vs Speed

# Image Classification

# Image Classification

Sr. No.	Number of errors	Image category
1.	0	quite easy
2.	1-3	easy
3.	4-6	highly disagreeable
4.	7-9	difficult
5.	10	very difficult

# Image Classification

# Examples of Images Category wise

Quite Easy  
(errors = 0)

Reference Output : True

Very Difficult  
(errors = 10)

Reference Output : False

Reference Output : False

Reference Output : True

Easy  
(errors= 1-3)

Reference Output :  
True

Highly  
Disagreeable  
(errors = 4-6)

Reference Output :  
False

Difficult  
(errors = 7-9)

Reference Output :  
True

Reference Output :  
True

Reference Output :  
False

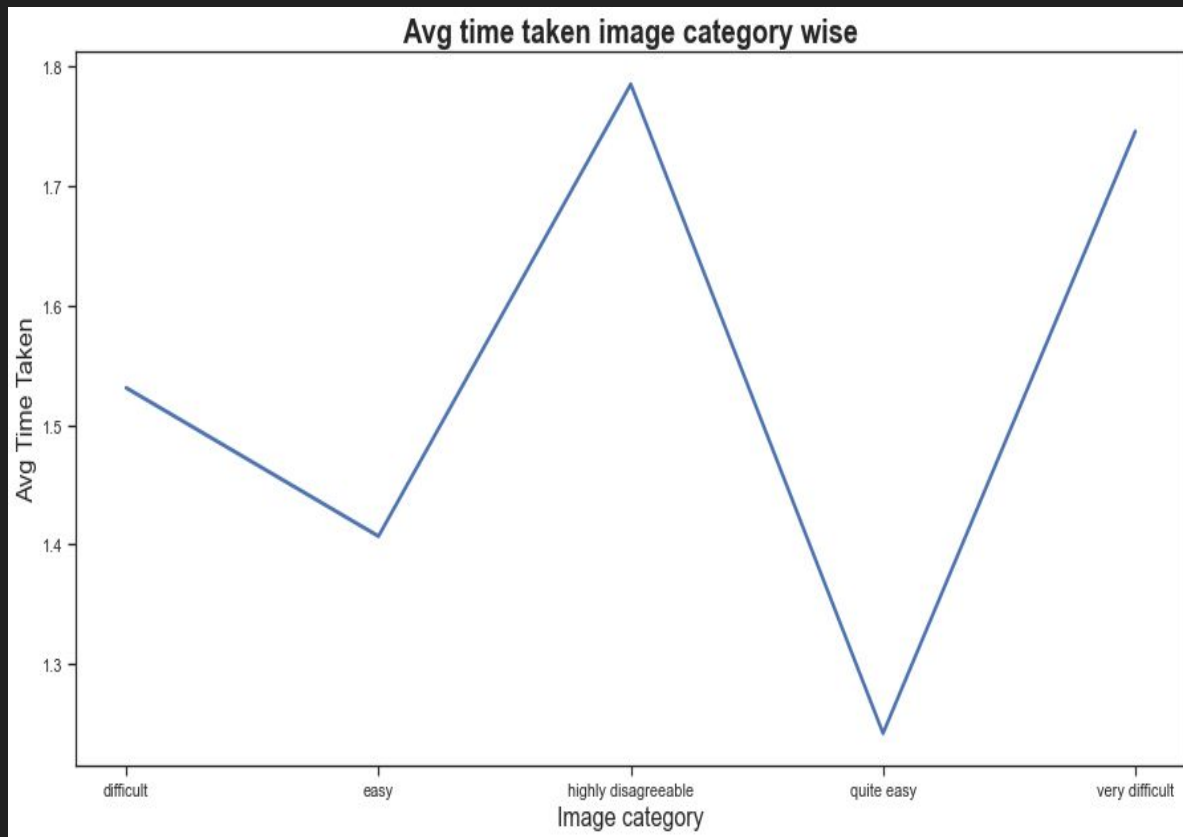

Reference Output :  
True

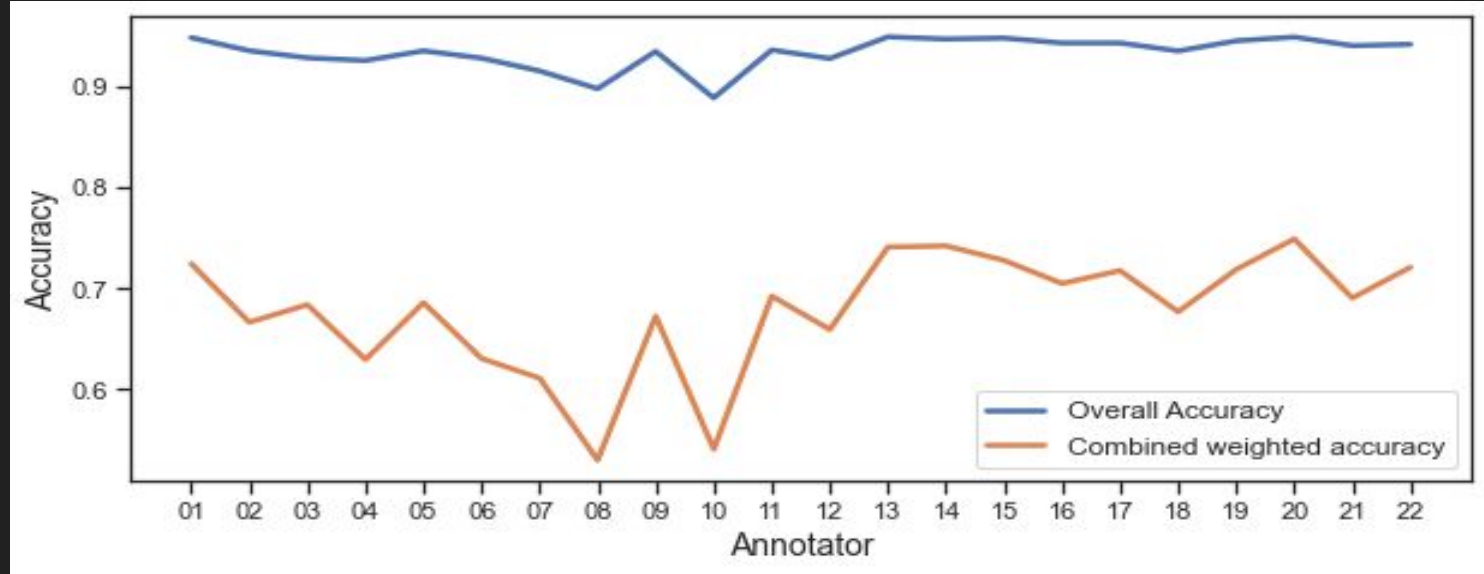

Focus Categories

# Metric Formulation

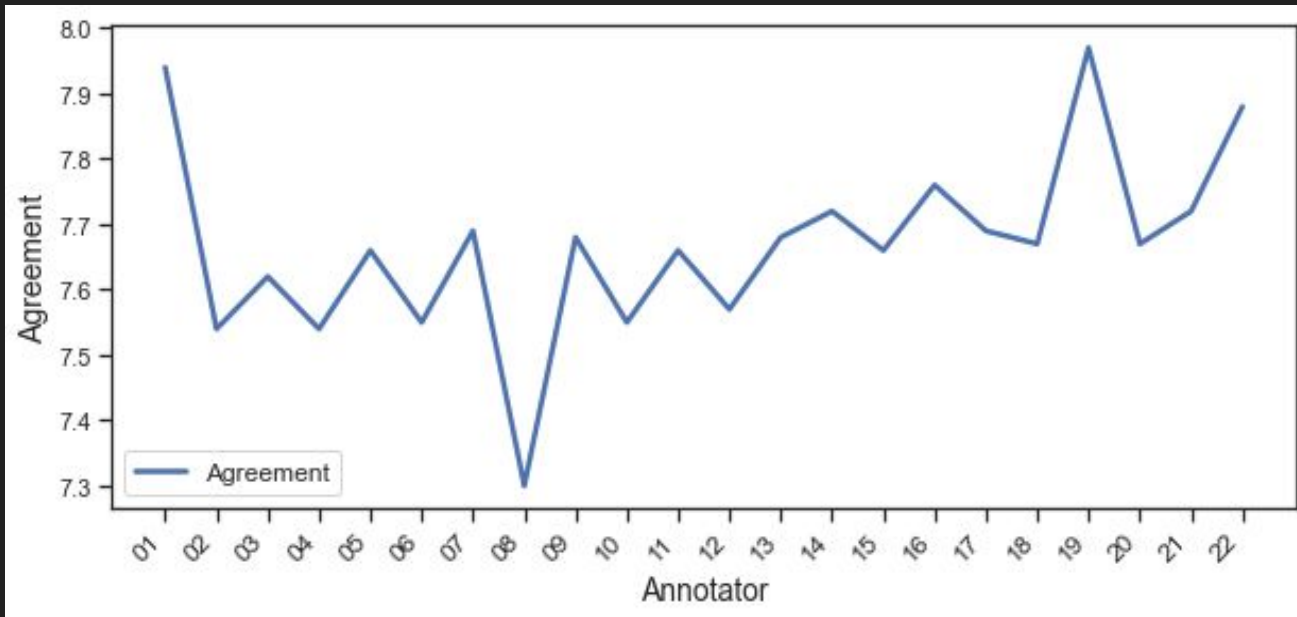

# Time Taken by Annotators

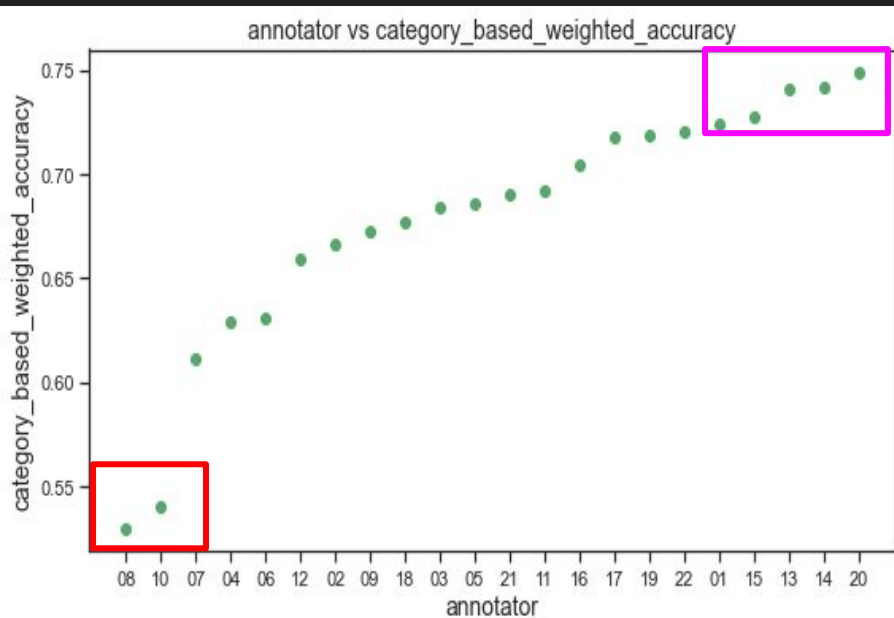

# Comparison of Overall accuracy and accuracy in focus categories

# Agreement of annotators

# Weighted accuracy & Agreement Distribution

Combined  
Score

=

$$\frac{(W1*Accuracy) + (W2*Agreement) + (W3*(1/time))}{W1+W2+W3}$$

# Results

## Good annotators

Sr. No.	Annotator
1.	Annotator_19
2.	Annotator_14
3.	Annotator_01

## Bad annotators

Sr. No.	Annotator
1.	Annotator_08
2.	Annotator_10
3.	Annotator_04

## Clustering results

annotator_num	labels
01	Good
02	Bad
03	Good
04	Bad
05	Good
06	Bad

22	Good

# Summary

- ❖ 91000 annotations by 22 annotators.
- ❖ Filtered duplicate data.
- ❖ Filtered further using Image classification.
- ❖ Combined score (accuracy, agreement and time).

# Conclusion

- ❖ Effective Image Classification
- ❖ Combined metric of weighted accuracy and level of agreement
- ❖ Image scrutiny
- ❖ Take on time

## Limitations

- ❖ Limited information about the image properties.
- ❖ Less data where errors were made.

## Further Scope of work

- ❖ Better image classification.
- ❖ Optimization of metric formula.
- ❖ Improved prototype.
- ❖ Regular learning for annotators.
- ❖ Annotations by GPT-4.

**Thank You**

# Code Overview

```
graph TD; A[Code Overview] --> B[Extract]; A --> C[Transform]; A --> D[Load]; B --> B1[Json parser]; C --> C1[Merger]; C --> C2[Entities extractor]; C --> C3[Data filter]; C --> C4[Metric Builder]; C --> C5[Clustering]; D --> D1[csv];
```

## Extract

- Json parser

## Transform

- Merger
- Entities extractor
- Data filter
- Metric Builder
- Clustering

## Load

- csv
